**Problem – Solution Fit for Laptop Request Catalog Item**

**Problem**

**Scenario: Delayed Laptop Allocation for Employees**

**User Persona:**
Ramesh, a newly joined employee in a mid-sized IT organization, needs a laptop to begin his assigned tasks. On his first day, he realizes there is no structured system to request IT assets. He is unsure whom to contact and ends up sending emails to HR and the IT team. The approval process takes time, and there is no clear tracking mechanism. Meanwhile, his work is delayed.

**Problem Statement:**

• Laptop requests are handled manually through emails or verbal communication.
• No centralized system to track request status.
• Approval process lacks automation and transparency.
• IT team struggles to manage multiple asset requests efficiently.
• Delays in laptop allocation affect employee productivity.

**Solution**

**How the Laptop Request Catalog Item Solves the Problem:**

The Laptop Request Catalog Item is developed using the **ServiceNow Zurich platform** to automate and standardize the laptop request process within the organization.

**1. Centralized Service Catalog Access:**

• Employees can submit laptop requests directly through the Service Catalog.
• The request form is structured and user-friendly.

**2. Role-Based Access:**

• Employees, Managers, and IT Admins have defined roles.
• Access is controlled based on responsibilities.

**3. Automated Approval Workflow:**

• Once submitted, the request automatically routes to the reporting manager.
• After approval, it moves to the IT team for fulfillment.

**4. Dynamic Form Behavior:**

• "Additional Accessories" checkbox enables accessory fields.
• Accessory details become mandatory when selected.
• Ensures accurate and complete request information.

**5. Real-Time Status Tracking:**

• Employees can track their request under "My Requests."
• Status updates (Requested → Approved → Fulfilled → Closed) are clearly visible.

**6. Email Notifications:**

• Automatic notifications are sent at each stage (Submission, Approval, Fulfillment).

**7. IT Admin Monitoring:**

• IT Admin dashboard provides visibility of pending and completed requests.
• Helps in efficient asset allocation and record maintenance.

**Technical Match to Solution:**

• Platform: ServiceNow (Zurich Release)
• Module Used: Service Catalog
• Workflow: Automated Approval Flow Designer / Workflow
• Access Control: Role-based access control (RBAC)
• Notifications: Configured via Email Notifications
• Data Storage: Request and task records stored in ServiceNow tables

**Impact:**

• Productivity: Employees receive laptops faster and start work without delay.
• Transparency: Clear visibility into approval and fulfillment stages.
• Efficiency: Automated workflows reduce manual effort.
• Accountability: Proper tracking of asset allocation.
• Reliability: Standardized and error-free request process.

**Conclusion:**

By identifying the inefficiencies in manual laptop request handling and implementing a structured ServiceNow-based solution, the Laptop Request Catalog Item achieves a strong problem–solution fit.

The system simplifies the request lifecycle, ensures proper approvals, enhances asset tracking, and improves overall organizational productivity.

It does not just manage laptop requests — it ensures smooth onboarding and operational efficiency for employees.
