Project Design Phase

Problem - Solution Fit

Date	17 February 2026
Team ID	LTVIP2026TMIDS37778
Project Name	Laptop Request Catalog Item

Proposed Solution – Laptop Request Catalog Item:

Proposed Solution

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	In many organizations, laptop requests are handled manually through emails or informal communication. This leads to delays in approvals, lack of transparency, difficulty in tracking request status, and inefficient asset management. As a result, employees experience onboarding delays and IT teams struggle with request monitoring.
2	Idea / Solution Description	The Laptop Request Catalog Item is developed using the ServiceNow Zurich platform. It provides a structured Service Catalog form where employees can request laptops digitally. The system includes automated manager approvals, IT fulfillment workflows, dynamic form behavior (conditional fields for accessories), role-based access control, and real-time request tracking.
3	Novelty / Uniqueness	Unlike manual email-based systems, this solution offers automation through ServiceNow workflows, conditional form logic (accessories become visible and mandatory when selected), centralized tracking, and role-based dashboards. It ensures process transparency and standardized asset allocation.

S.No.	Parameter	Description
4	Social Impact / Customer Satisfaction	The system improves employee productivity by reducing delays in laptop allocation. It ensures accountability and transparency in IT asset management. Employees feel confident and informed throughout the request lifecycle, while IT teams benefit from organized and trackable workflows.
5	Business Model (Operational Value)	Although primarily an internal organizational solution, it reduces operational costs by minimizing manual effort, preventing asset mismanagement, and improving efficiency. It enhances IT governance and supports digital transformation initiatives within the organization.
6	Scalability of the Solution	The solution is scalable within the ServiceNow platform. It can be extended to manage other asset requests (mobile phones, monitors, software access), integrated with CMDB for asset tracking, and enhanced with SLA policies, reporting dashboards, and automation for future growth.

Proposed Solution Overview:

To address the inefficiencies in manual laptop request handling, our team developed the **Laptop Request Catalog Item** using the ServiceNow Zurich platform.
This solution introduces a structured and automated workflow that connects employees, managers, and IT administrators in a centralized system. By incorporating role-based access, dynamic form behavior, automated approvals, and real-time tracking, the system eliminates confusion and delays.
The proposed solution enhances transparency, improves productivity, ensures proper asset allocation, and supports organizational digital transformation.
